

1 **CLAIM LISTING**

2
3 1. (Currently amended) A workflow project management system, comprising:
4 a form route manager for receiving and sending email according to a route, the
5 route comprising a step-by-step sequence of email addresses, and communicating with
6 a project management system, wherein the form route manager includes:

7 an in-box adapted to receive email;

8 a first sequencer adapted to as follows:

9 compare a step field of the email with the route,

10 define the next email address based on the compare,

11 update the email address to the next email address,

12 update the step field to the next step; and

13 an out-box adapted to send email to the next email address, wherein the project
14 management system sends a message at a project segment to the form route manager
15 to initiate workflow on the route.

16
17 2. (Currently amended) A workflow project management system, comprising:
18 a form route manager for receiving and sending email according to a route, the
19 route comprising a step-by-step sequence of email addresses, and communicating with
20 a project management system, wherein the form route manager includes:

21 an in-box adapted to receive email;

22 a first sequencer adapted to as follows:

23 compare a step field of the email with the route,

24 define the next email address based on the compare,

25 update the email address to the next email address,

26 update the step field to the next step; and

27 an out-box adapted to send email to the next email address, and wherein the form route
28 manager sends a message to the project management system at a project segment.

29 3. (Original) The workflow project management system of claim 1 or 2, wherein
30 the message includes the time the message was sent.

1
2 4. (Original) The workflow project management system of claim 1 or 2, wherein
3 the message contains a segment identifier.
4

5 5. (Original) The workflow project management system of claim 1 or 2, wherein
6 a workflow route is associated with a project segment.
7

8 6. (Original) The workflow project management system of claim 2, wherein the
9 project management system calculates the project schedule based on the message.
10

11 7. (Original) The workflow project management system of claim 1 or 2, wherein
12 the message is an email message.
13

14 8. (Original) The workflow project management system of claim 1 or 2, wherein
15 a workflow is initiated when a project segment is initiated or completed.
16

17 9. (Currently amended) A workflow project management system comprising a
18 ~~workflow system including~~ a form route manager for receiving and sending email
19 according to a route, the route comprising a step-by-step sequence of email addresses,
20 comparing a step field of the email with the route to determine if the email is at the last
21 step in the route, and if so, deleting the email, and if not, setting the step field in the
22 email to the next step in the route and the email address to the email address of the
23 next step in the route, and communicating with a calendar system containing a list of
24 events, and wherein the list of events is initiated at a time set in the calendar system.
25

26 10. (Currently amended) The workflow project management system of claim 9,
27 wherein the ~~workflow system~~ form route manager sends a message to set or change or
28 delete a time in the calendar system.
29
30

1 11. (Currently amended) A workflow project management system, comprising a
2 ~~workflow system, including~~
3 a project management system; and
4 a form route manager containing a route, the route comprising a step-by-step
5 sequence of email addresses, comparing a step field of the email with the route to
6 determine if the email is at the last step in the route, and if so, deleting the email, and if
7 not, setting the step field in the email to the next step in the route and the email address
8 to the email address of the next step in the route, and communicating with a project
9 management system ~~containing project segments~~, wherein the project management
10 system sends a message to the ~~workflow system~~ form route manager to initiate the
11 workflow on the route comprising setting an indicator of the workflow route in a
12 message and sending the message to the ~~workflow system~~ form route manager.

13
14 12. (Currently amended) A workflow project management system comprising a
15 form route manager containing a route, the route comprising a step-by-step sequence of
16 email addresses, and communicating with a project management system containing
17 project segments wherein the ~~workflow system~~ form route manager determines if the
18 email is at the last step in the route, and if so, deletes the email, and if not, sets the step
19 field in the email to the next step in the route and the email address to the email
20 address of the next step in the route, and ~~sets an indicator to the step of the route and~~
21 ~~sends a message to update the project management system when the step of the route~~
22 ~~completes.~~

23 13. (Canceled)

24
25 14. (Canceled)

1 15. (Original) A workflow project management system, wherein the system is
2 connected to a computer network and an email system, wherein the email includes a
3 step field and a document, comprising:
4 a form route manager, with an email address, connected to the computer
5 network, capable of accessing a route, a sequence of email addresses in the computer
6 network, comprising:
7 an in-box adapted to receive email;
8 a first sequencer adapted to as follows:
9 compare the step field with the route,
10 define the next email address based on the compare,
11 update the email address to the next email address,
12 update the step field to the next step,
13 an out-box adapted to send email to the next email address, wherein the next
14 mail address includes an in-box adapted to receive email from the form route manager,
15 and an out-box adapted to send email to the form route manager, wherein the form
16 route manager sends a message to a project management system containing project
17 segments, and after comparing the step field to the route, determines if the indicator is
18 set, and if set, sends a message to the project management system.

19
20 16. (Original) The workflow project management system of claim 15, wherein
21 the message contains the time when the message was sent.

22
23 17. (Original) The workflow project management system of claim 15, wherein
24 the address in the route includes a project segment identifier.

25
26 18. (Currently amended) The workflow project management system of claim ~~15~~
27 17, wherein the message contains the project segment identifier.

28
29 19. (Original) The workflow project management system of claim 15, wherein
30 the project management system contains project segments and relates a project
segment to an email based workflow route.

1
2 20. (Original) The workflow project management system of claim 15, wherein
3 the project management system at the beginning of a project segment sends an email
4 to the form route manager to initiate a workflow route.

5
6 21. (Original) The workflow project management system of claim 15, wherein
7 the project management system at the end of a project segment sends an email to the
8 form route manager to initiate a workflow route.

9
10 22. (Currently amended) A workflow project management system, comprising:
11 ~~a workflow system, including~~
12 a calendar system containing calendar events; and
13 a form route manager for receiving and sending a message along a route of
14 computer addresses in a computer network, wherein the ~~workflow system~~
15 ~~communicates with a calendar system containing calendar events~~ the form route
16 manager compares a step field in the message with the route, defines the next
17 computer address based on the compare, updates the computer address to the next
18 computer address in the route, updates the step field to the next step and
19 communicates with the calendar system, wherein the computer address has an
20 indicator defining that a message is to be sent to the calendar system, and the form
21 route manager is adapted to after comparing the step field to the route determine if the
22 indicator is set, and if set, send a message to the calendar system.

23 23. (Original) The workflow project management system of claim 22, wherein
24 the message is an email.

25
26 24. (Original) The workflow project management system of claim 22, wherein
27 the message contains the time when the message was sent.

28
29 25. (Original) The workflow project management system of claim 22, wherein
30 the computer address in the route includes a calendar event identifier.

1
2 26. (Original) The workflow project management system of claim 22, wherein
3 the message contains the calendar event identifier.
4

5 27. (Original) The workflow project management system of claim 22, wherein
6 the message is used to add, modify, or delete a calendar event.
7

8 28. (Original) The workflow project management system of claim 22, wherein
9 the calendar system contains calendar events and relates a calendar event with an
10 email-based workflow route.
11

12 29. (Original) The workflow project management system of claim 22, wherein
13 the calendar system at the beginning of a specific calendar event sends an email to the
14 form route manager to initiate a workflow route.
15

16 30. (Original) The workflow project management system of claim 22, wherein
17 the calendar system at the end of a specific calendar event sends an email to the form
18 route manager to initiate a workflow route.
